Figure 1 consists of 12 histograms arranged horizontally, each representing a different value of n from 10 to 120. The x-axis for all histograms is labeled 'x' and ranges from 0 to 120. The y-axis is labeled 'count' and ranges from 0 to 100. The histograms show that as n increases, the distribution of the number of non-zero elements in the vector x becomes more concentrated around zero. For $n=10$, the distribution is broad and centered around 5. As n increases, the peak at zero becomes more prominent, and the distribution narrows. By $n=120$, the distribution is very narrow and centered at zero, with a peak count of approximately 100.
